

Meteor Exception Handling and Error Messages

The following is a list of error messages that could be encountered within Meteor. The error messages fall into one of two categories, either display messages or internal messages. The text of all display messages may be configured by modifying the *messages.properties* file.

Display Messages

Error Message Code	Error Message Description or Text	Reason(s) for the Error Message
D-001	No Index Providers in Meteor Registry. Please contact your Meteor Access Provider.	The Access Provider can successfully communicate with the Registry, but no Index Providers were returned to the Access Provider
D-002	One or more Index Providers were unable to respond. Please contact your Meteor Access Provider.	There was a communication error between the Access provider and one or more Index Providers.
D-003	No Data Found	There were no errors communicating with the Index Provider but there were no Data Providers in the response
D-004	No Data Providers were able to respond.	There were communication errors with every Data Provider
D-004	One or more Data Providers were unable to respond	There were communication errors with one or more Data Providers but others were able to respond.
D-005	No data found for this inquiry.	No Data Providers returned data to the Access Provider
D-006	Access Provider error. Please contact your Meteor Access Provider.	The Access Provider's credentials did not validate. Please see the log file for more detailed descriptions.
